

The Global Calculator

Sector metrics from 2°C pathways

The Global Calculator: sector metrics from 2°C pathways

This note sets out how the global transport, buildings, manufacturing, electricity generation, and land, food and bioenergy sectors could change in the period to 2050 if the world was on track to meet the 2°C target.

These results are based on four plausible pathways which all have a 50% chance of constraining global mean temperature increase to 2°C, as set out in the Global Calculator tool¹. These pathways all have lifestyle settings consistent with economic development. However, they differ according to the technologies, fuels and land use choices used to service these lifestyles. For more detail on these pathways, see the annex of our main report: *Prosperous living for the world in 2050: insights from the Global Calculator*.

Businesses may be interested in using these tables to understand how the market for clean technologies may evolve in the period to 2050. Governments may want to use these metrics as a benchmark for assessing their own country's pathway to 2050.

Transport

| | Metric | Unit | 2011 | 2020 | 2030 | 2040 | 2050 |
|------------------------|---|----------------------------------|-------|--------------|--------------|----------------|----------------|
| Lifestyle | Average domestic travel per person per year | Passenger-km per person per year | 7,500 | 8,900 | 9,900 | 10,600 | 11,000 |
| | Proportion of domestic travel by car | % | 40 | 40 | 40 to 45 | 45 | 45 to 50 |
| | Average distance travelled per person per year by air | Passenger-km per person per year | 770 | 870 to 880 | 940 to 960 | 1,040 to 1,070 | 1,160 to 1,220 |
| | Cars per person | Number | 0.12 | 0.14 to 0.15 | 0.15 to 0.18 | 0.15 to 0.21 | 0.15 to 0.24 |
| Technologies and fuels | Efficiency of the average passenger car (all cars – internal combustion engine, electric, hydrogen, etc.) | litres per 100km | 8.6 | 7.1 to 7.2 | 5.6 to 5.9 | 4.6 to 4.9 | 3.9 to 4.1 |
| | Efficiency of the average passenger car (internal combustion engine only) | litres per 100km | 8.6 | 7.3 to 7.4 | 6.1 to 6.2 | 5.2 to 5.2 | 4.3 to 4.5 |
| | Number of internal combustion engine cars on the road | Million | 850 | 970 to 1,120 | 890 to 1,380 | 750 to 1,620 | 560 to 1,820 |
| | Number of electric cars on the road | Million | 2 | 30 to 40 | 80 to 140 | 140 to 280 | 230 to 460 |
| | Number of hydrogen cars on the road | Million | – | 0 to 30 | 0 to 100 | 0 to 200 | 0 to 340 |
| | Number of plug-in hybrid cars on the road | Million | – | 30 to 50 | 70 to 170 | 140 to 350 | 230 to 570 |

¹ These pathways are: distributed effort <http://tool.globalcalculator.net/distributedeffort>, consumer reluctance <http://tool.globalcalculator.net/consumerreluctance>, low action on forests <http://tool.globalcalculator.net/lowactiononforests>, and consumer activism <http://tool.globalcalculator.net/consumeractivism>

Buildings

| | Metric | Unit | 2011 | 2020 | 2030 | 2040 | 2050 |
|------------------------|---|-------------------|------|--------------|--------------|----------------|----------------|
| Lifestyle | Sales of light bulbs | Billion | 7.7 | 9.6 to 9.9 | 11.7 to 12.5 | 13.6 to 15.2 | 14.7 to 17.9 |
| | Sales of refrigerators | Million | 160 | 210 | 270 to 300 | 330 to 400 | 390 to 550 |
| | Sales of televisions | Million | 470 | 640 to 650 | 840 to 940 | 1,060 to 1,300 | 1,290 to 1,740 |
| | Lifespan of the average television | Years | 7.0 | 6.7 to 7.0 | 6.1 to 7.0 | 5.6 to 7.0 | 5.0 to 7.0 |
| | Average number of washing machines per household | Number | 0.6 | 0.6 | 0.7 | 0.8 | 0.9 |
| | Average household size | m ² | 87 | 90 | 93 | 95 | 99 |
| | Average urban indoor home temperature during the summer | °C | 26.5 | 26.0 | 25.4 | 24.7 | 24.1 |
| | Average urban indoor home temperature during the winter | °C | 17.5 | 18.0 | 18.6 | 19.3 | 19.9 |
| | Access to electricity in urban areas | % of households | 94 | 95 | 97 | 98 | 98 |
| | Access to electricity in rural areas | % of households | 68 | 71 | 75 | 78 | 81 |
| Technologies and fuels | Proportion of heat for urban buildings from zero carbon or electric sources | % | 5 | 8 to 12 | 14 to 25 | 19 to 37 | 25 to 50 |
| | Rate of heat loss (urban homes) | GW/m ² | 16.9 | 15.3 to 15.7 | 12.2 to 13.5 | 9.1 to 11.2 | 6.0 to 9.0 |
| | Proportion of households using electric cookers | % total | 13 | 20 | 30 | 30 to 50 | 40 to 60 |
| | Power of the average washing machine | Watts | 700 | 650 | 570 to 580 | 490 to 500 | 420 to 430 |
| | Power of the average TV | Watts | 250 | 240 | 230 | 210 | 190 to 200 |

Manufacturing

| | Metric | Unit | 2011 | 2020 | 2030 | 2040 | 2050 |
|------------------------|--|----------------|------|------------|------------|------------|------------|
| Technologies and fuels | Iron and steel production | Billion tonnes | 1.5 | 1.7 | 1.8 to 1.9 | 1.8 to 2.1 | 1.9 to 2.3 |
| | Chemicals production | Billion tonnes | 0.8 | 0.8 to 0.9 | 0.9 to 1.1 | 1.0 to 1.3 | 1.0 to 1.6 |
| | Pulp and paper production | Billion tonnes | 0.6 | 0.7 | 0.8 to 0.9 | 1.0 to 1.1 | 1.1 to 1.4 |
| | Cement production | Billion tonnes | 3.6 | 3.7 to 3.9 | 3.5 to 3.9 | 3.3 to 3.8 | 3.1 to 3.6 |
| | Timber production | Billion tonnes | 0.8 | 0.9 | 1.0 to 1.1 | 1.2 to 1.3 | 1.3 to 1.5 |
| | Proportion of total industry CO ₂ emissions captured by CCS | % | 0 | 0 | 0 to 9 | 8 to 26 | 16 to 43 |
| | Reduction in energy demand per unit of iron/steel | % | 0 | 4 to 6 | 8 to 13 | 12 to 19 | 15 to 25 |
| | Reduction in energy demand per unit of chemical | % | 0 | 0.3 to 0.7 | 0.5 to 1.3 | 0.6 to 1.8 | 0.9 to 2.4 |
| | Reduction in energy demand per unit of paper/pulp | % | 0 | 10 | 20 | 30 to 40 | 40 to 50 |
| | Reduction in energy demand per unit of cement | % | 0 | 3 to 5 | 6 to 9 | 6 to 12 | 6 to 15 |

Electricity generation and fuels

| | Metric | Unit | 2011 | 2020 | 2030 | 2040 | 2050 |
|------------------------|--|-----------------------|------|----------------|----------------|----------------|----------------|
| Technologies and fuels | Carbon intensity of electricity generation | gCO ₂ /kWh | 580 | 445 to 470 | 310 to 350 | 150 to 210 | -5 to 70 |
| | Coal primary energy supply | EJ | 160 | 155 | 130 to 140 | 90 to 110 | 45 to 60 |
| | Oil primary energy supply | EJ | 180 | 190 to 200 | 170 to 190 | 130 to 160 | 90 to 130 |
| | Gas primary energy supply | EJ | 120 | 130 | 125 to 130 | 110 to 120 | 70 to 90 |
| | Installed capacity of carbon capture and storage | GW | 0 | 20 to 30 | 110 to 380 | 220 to 760 | 490 to 1,490 |
| | Installed capacity of nuclear | GW | 360 | 480 to 510 | 530 to 660 | 600 to 820 | 690 to 1,030 |
| | Installed capacity of wind | GW | 240 | 600 to 820 | 840 to 1,650 | 1,290 to 2,800 | 2,320 to 4,710 |
| | Installed capacity of hydroelectric | GW | 970 | 1,410 to 1,510 | 1,520 to 1,670 | 1,630 to 1,870 | 1,750 to 2,100 |
| | Installed capacity of marine | GW | 1 | 3 to 4 | 20 to 30 | 60 to 100 | 100 to 240 |
| | Installed capacity of solar | GW | 70 | 280 to 320 | 590 to 910 | 1,150 to 2,400 | 2,200 to 4,150 |
| | Installed capacity of geothermal | GW | 10 | 20 to 25 | 40 to 60 | 100 to 170 | 170 to 290 |
| | Installed capacity of storage | GW | 120 | 180 to 190 | 250 to 310 | 310 to 500 | 400 to 800 |

Land, food and bioenergy

| | Metric | Unit | 2011 | 2020 | 2030 | 2040 | 2050 |
|-----------|---|-------------------------|-------|----------------|----------------|----------------|----------------|
| Lifestyle | Calories consumed | kcal per person per day | 2,180 | 2,200 | 2,220 | 2,260 | 2,330 |
| | Calories consumed which are from meat | kcal per person per day | 190 | 190 | 190 | 200 | 200 to 220 |
| | Total non-commercial forest area | Millions of hectares | 3,800 | 3,700 to 3,800 | 3,800 to 3,900 | 3,800 to 4,000 | 3,800 to 4,100 |
| Land use | Bioenergy crop production | EJ | 10 | 15 to 20 | 30 to 45 | 35 to 70 | 40 to 95 |
| | Growth in crop yields relative to 2011 | % | – | 10 to 15 | 20 to 30 | 30 to 45 | 40 to 60 |
| | Proportion of cattle that are fed grains and residues (intensified) | % | 6 | 5.6 to 7.3 | 4.7 to 9.9 | 3.9 to 12.4 | 3 to 15 |
| | Increase in animal density for pasture-fed cattle | % | – | 10 | 20 to 25 | 35 to 40 | 45 to 50 |
| | Proportion of food crops that are wasted post-farm | % | 25 | 25 | 20 | 20 | 15 to 20 |

Emissions and miscellaneous

| | | 2011 | 2020 | 2030 | 2040 | 2050 |
|---------------------------------|---|------|------|------------|------------|------------|
| Global greenhouse gas emissions | Billion tonnes CO ₂ e | 50 | 47 | 41 to 42 | 31 to 32 | 19 to 21 |
| Global population | Billion | 7.0 | 7.7 | 8.4 | 9.0 | 9.6 |
| Urbanisation | % of global population that live in urban areas | 52 | 56 | 60 | 63 | 66 |
| Number of households | Billion | 2.3 | 2.7 | 3.0 | 3.4 | 3.8 |
| Emissions per person | Tonnes CO ₂ e per year | 7.1 | 6.1 | 4.9 to 5.0 | 3.4 to 3.5 | 1.9 to 2.2 |

The Global Calculator

Use the free [Global Calculator tool](#).

[Read our report](#) showing what the Calculator tells us about climate change and international development.

A prosperous world for everyone in 2050

Your browser can't play this video.
[Learn more](#)

The Global Calculator is a free and interactive tool that helps you to understand the link between our lifestyles, the energy we use, and the consequences for our climate. It is aimed at anyone interested in exploring what a low-carbon world could look like in 2050. The Calculator shows that it is possible to prevent dangerous climate change and ensure people's living standards continue to improve if we act now.

lifestyles continue to improve while still tackling climate change, we must transform the technologies and fuels we use, and make smarter use of our limited land resources. The report [Prosperous living for the world in 2050 \(PDF 1.43MB\)](#) uses evidence from the tool to show what we need to achieve.

in Paris later this year, this Calculator demonstrates to our political leaders that a cleaner, safer and fairer future is possible. *Friends of*

What we found > Earth

Want to dig deeper into the data?

The Global Calculator is the most open-source model of the world's energy system ever built. You can download the full Excel model to explore all the assumptions used and methodology used. You can even make your own version to test out your ideas.
